Jack —

Sending over some photos of what I'm now calling the Compute Hall — that's Building 3, our 75×300 ft main floor.

How the four buildings break down:

Building 3 (Compute Hall) — 75×300 ft. This is where the racks live. Floor is as thick as a loading dock — wood slats over dressed beams, serious insulation. The brick mass alone keeps heat out. Solar on top means we're not fighting the sun inside.

Building 4 (Power Hall) — 150×250 ft. This is where everything that feeds Building 3 lives: CDUs, 800V bulk transformer, MV switchgear, batteries, all of it indoors and protected. Generators stay outside. Everything else goes in here.

Buildings 1 & 2 (Trappeys Museum) — These are the 100-year-old originals. World War II era. When you walk in, you can't tear them down — the brick, the concrete, the way they built it. Full restoration. Historic value, public-facing, great for press and community buy-in. The park sits right out front. You'll love it.

Solar: We're sitting on close to 170,000 sq ft of roof across the whole campus. That's a serious power offset — we're building to maximize every panel.

Location context: City Public Works is right next door — they fuel their natural gas fleet there, solid infrastructure anchor. Water treatment plant on the other side of 90. Airport is a stone's throw. UL Lafayette is about a mile out, Cajun Dome two miles. This corridor was built during the oil boom and it never stopped being an energy infrastructure hub. That's why it works.

I also shot a video walking the Compute Hall from front door to back — sending that along so you can see the space firsthand. The floor, the ceiling height, the bones — it just needs to be cleaned up and it's ready.

Where things stand: NVIDIA meeting is in two days — their key people, covering everything from grid tie-in to potentially expanding city infrastructure. Paperwork for local and state funds is moving this week. Universities are next.

Basically — grid to chip, we've got it handled. Let me know what you need to move forward.

Hey Scott, this is awesome, thanks so much for all of the info. How did the meetings go?

I only touch GPUs, so once you have the BOM that's when I come into play.

What are you looking for in terms of my help? I guess I'm not super clear on this. Would love to bring in my financing partners if that is also helpful.

Best,  
Jack
